

Objective:

To demonstrate NegativeArraySizeException

Steps for execution:

STEP 1:

Open IntelliJ IDEA.

STEP 2:

Create a Java project.

STEP 3:

Create a package named:

javacore

STEP 4:

Create a Java class named:

NegativeArraySizeException

STEP 5:

Write the program in the class.

STEP 6:

Save the program.

STEP 7:

Compile the program.

STEP 8:

Run the program.

STEP 9:

The program starts execution from the `main()` method.

STEP 10:

The try block executes.

STEP 11:

The array is created with size -5.

STEP 12:

`NegativeArraySizeException` occurs.

STEP 13:

The catch block handles the exception.

STEP 14:

The message "Array size can't be negative" is displayed.

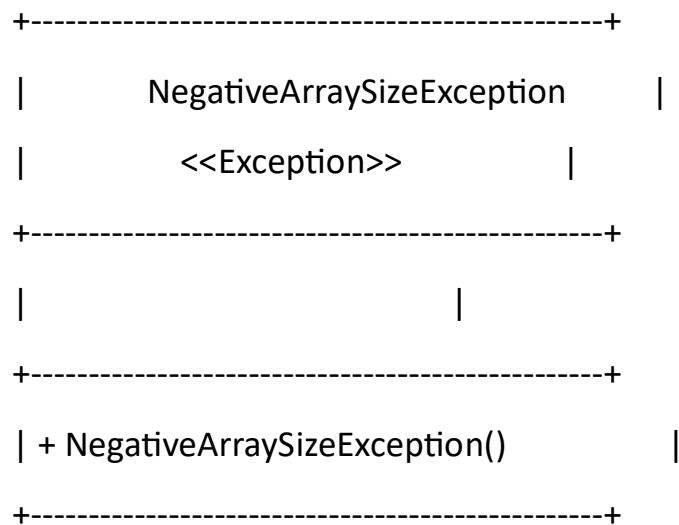

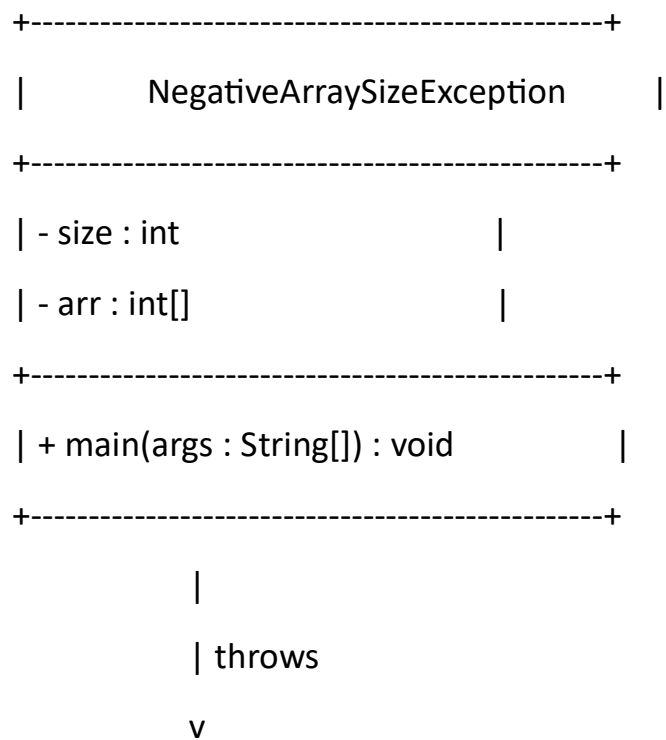

STEP 15:

"Program is continued..." is displayed.

STEP 16:

The program ends.

UML Class Diagram

Code:

```
package javacore;
```

```
public class NegativeArraySizeException{
    public static void main(String[] args) {
```

```
try {  
    int size = -5;  
  
    int arr[] = new int[size];  
  
    System.out.println("Array created");  
}  
catch (NegativeArraySizeException e) {  
    System.out.println("Array size can't be negative");  
}  
  
System.out.println("Program is continued...");  
}  
}
```

Output:
Array size can't be negative
Program is continued...
