

Objective:

To demonstrate security exception

Execution Steps:

STEP 1:

Open IntelliJ IDEA.

STEP 2:

Create a Java project.

STEP 3:

Create a package named:

javacore

STEP 4:

Create a Java class named:

SecurityExample

STEP 5:

Write the given program in the class.

STEP 6:

Save the program.

STEP 7:

Compile the program.

STEP 8:

Run the program.

STEP 9:

Execution starts from the main() method.

STEP 10:

The try block starts executing.

STEP 11:

The statement

```
throw new SecurityException();
```

creates and throws a SecurityException.

STEP 12:

The catch block catches the SecurityException.

STEP 13:

"Security Exception" is displayed.

STEP 14:

"Program ended" is displayed.

STEP 15:

The program ends.

Algorithm:

1. Start the program.
2. Execute the main() method.
3. Start the try block.
4. Create and throw a SecurityException using:

```
throw new SecurityException();
```

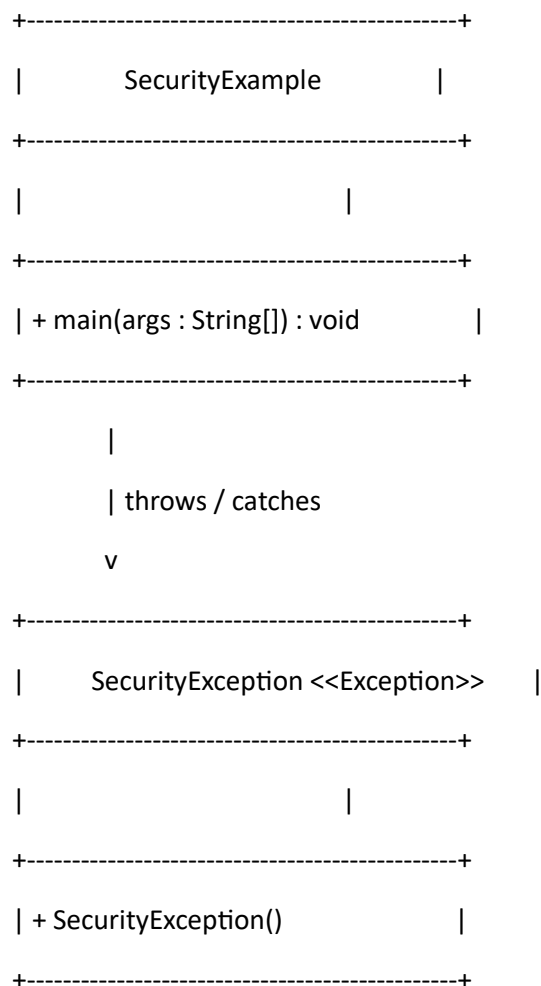

5. The exception is caught by the catch block.

6. Display "Security Exception".

7. Display "Program ended".

8. Stop the program.

UML Class Diagram:

Code:

```
package javacore;
```

```
public class SecurityExample {
```

```
public static void main(String[] args) {  
  
    try {  
        throw new SecurityException();  
    }  
    catch (SecurityException e) {  
        System.out.println("Security Exception");  
    }  
  
    System.out.println("Program ended");  
}  
}
```

Output:

Security Exception

Program ended
